

1

Validation of Old Compute Resources

- * Resource Inventory
- * Validation Resource
- * Assessment Process
- * Validation Result
- * Reporting & logs
- * Actions

Data cleaning Task

- * Raw Data Source (DBs, APIs)
- * Data Profiling (Identify)
- * Cleansing Rule
- * Data Cleaning Output

Service Health Map

- * Service list
- * Health indicators
- * Data Cleansing
- * Health Evolution
- * Health Status
- * Visualization

Designing a Rule engine for boskartz to automate enforce and monitor integrity rule across service

Cloud Resource Capacity Analysis Task

- * Cloud Resource inventory
- * Usage Data collection
- * Capacity Analysis
- * Bottleneck Identification
- * Alert & Notification

- * LLB Service list
- * Evaluation Criteria
- * Data Collection
- * Evolution Process
- * Evolution Result
- * Improvement Recommendation
- * Report & Review

2)

Input: Old compute Resources.

- * Old Service
- * Storage Device
- * Network Devices
- * Virtual Machines (VMs)
- * Other IT assets

Actions

- * Continue in Use
- * Upgrade / Reconfigure
- * Retire / Decommission
- * Repurposes.

Validation Criteria

- * Performance
- * Security
- * Compatibility
- * Reliability
- * Capacity Utilization
- * Compliance
- * Cost Efficiency

Validation Process

- * Classification
[Needs attention, invalid]
- * Scoring & assessment
[Rules engine / checks each criteria]

Validation Of Old compute Resources

Validation Results

- * Validation Resources
- * Need Attention
- * Invalid Resources.

- * Asset Discovery
- * Data collection
- * Apply Validation criteria.
- * Sorting & assertion
- * Classification

Validation Report

Audit logs

Alert and Notification

Service List

- * E-commerce Service
[Product, Cart, Checkout]
- * Payment Service
- * User Service
- * Order Service
- * Support Service

Data Collection

- * Monitoring Tools
- * Logs
- * Metrics
- * Alert and Event
- * User Feedback

Service Health Map

Visual representation of the status, performance

Visualization (Service Health Map)

- * Dashboard Overview
- * Service View
- * Dependency Map
- * Drill - Down
- * Filters

Health Indicators

Availability (uptime/downtime)
 Response Time (Avg/P95)
 Error Rate (%)
 Throughput (Request per sec)
 Resource Usage
 (CPU, Memory, DB)

Health Status Classification

Healthy

Warning

Critical

Unknown

Benefits

- * Quick Identification
- * Improved User experience
- * Proactive Monitor
- * Better Decision Making

4

LLB Service List

- * application load balancer
- * Gateway load balancer
- * Custom / third-party
- * Classic Load Balancer
- * Network load balancer

Data collection

- * Monitoring Tools [cloudwatch etc]
- * Logs [access logs]
- * Metrics [CPU, RPS]
- * Traffic Data [Bandwidth]
- * Incident & Alert
- * User feedback.

EVALUATION OF LAB SERVICES

Evaluation Process

Define Objective

Apply criteria

Source & Weight

Compare Service

Evaluation Result

Best Fit Services

Alternative Options

Assess for improvement

Evaluation Criteria

- * Performance
- * Availability and Reliability
- * Scalability
- * Cost effectiveness
- * Manageability

Actions

- * Deploy Recommended
- * Optimize configuration
- * Monitor continuously
- * Review Periodically

Benefit

- * Better user experience
- * Higher availability
- * Scalability
